

A One real pull request, and what each rule does to it

a product reviews
one line

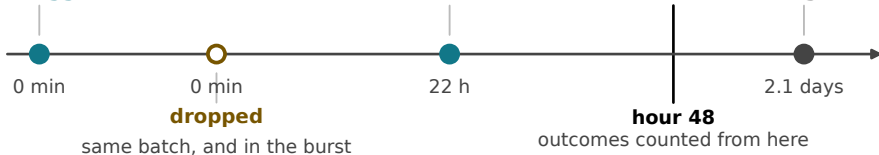

a person replies
to that comment

after the line,
so it counts

the trigger

the answer

merged

Copilot reviewing a Devin pull request. Filled marks count; hollow ones a rule throws out.

B Four levels of proof, never treated as one

1. Both present

two products act
on the same PR

2. Answered

a reply names the
review comment

3. Taken up

who acts next, once
the burst is over

4. Accepted

merged, counted only
after hour 48

A level never implies the level to its right. None of them observes a private run, a shared plan, or whether the review point was understood.
